

DEMONSTRATING THE EMRO QUANTUM HOLOGRAPHIC DISCS

KEYS TO SUCCESS: HYDRATION, LOCATION, DURATION.

There are 4 easily demonstrable tests that we use to let people experience the EMRO Quantum technology:

- 1) **Cell Phone EMF Test (using EMRO Quantum Cell Phone Defense):** Stand to one's right, ask them to give up any cell phone and then to tightly squeeze their thumb and ring finger together on their right hand, giving you permission to pull them apart while they resist. Ask them to put a live cell phone in their left ear as if to talk on it and tell you when to pull with them resisting (should be weaker). Let them hold the "EMRO Quantum Cell Phone Defense" holographic disc in their left hand behind the phone & pull again (should be stronger). To use, place the disc on the back of the cell phone, computer, or other electronic device. You can also use the EMRO Quantum GPS wristband since it helps improve a persons' strength and endurance.

- 2) **Strength/Center of Gravity Test (use EMRO Quantum Performance (Energy) or EMRO Quantum GPS wristband):** Put the discs, wristband, and cell phone away from the person. Ask them to stand with both feet totally together and arms down by their sides. Form their right hand into a fist. You stand on their right side facing them. Open your hands one on top of each other & place their right fist into your hands. Confirm the person's right shoulder or arm is not in pain and ask them to press their right fist down into your cupped hand. They can "lock" their shoulder and elbow and press down their fist hard into your hand. At the same time, you will lift up on their fist resisting their downward pressure. It should be easy to tip them to the other side, displaying a lack of strength and center of gravity. Now place the energy disc or the wristband on the body or in a pocket on their left side. It doesn't have to touch skin but needs to be within an inch of the body. Repeat the process. The person should feel stronger and stand more stable!

- 3) **Balance Test (use EMRO Quantum Performance (Energy) or EMRO Quantum GPS wristband):** Put holographic disc away from the person. Ask them to stand like a flamingo bird on one leg (usually standing on their left with the right leg lifted and bent back at the knee). With their arms held firmly out to each side, place your right hand on their right arm between the elbow and wrist, asking them to tell you when to press down, trying to press them off balance. This should be easy since you are pressing on the side where there is no leg touching ground. Now place the holographic disc or wristband inside their left collar or pocket, or in their left hand. Repeat the process of pressing down on their right arm. They should feel more balanced & stand more stable!

- 4) **Range of Motion Test (use EMRO Quantum Performance (Energy) or EMRO Quantum GPS wristband):** Have the person open their right hand and put their thumb on the end of their nose. Ask them to turn to their right at the waist and see how far they can rotate. Now place the energy hologram or band on the body or in a pocket on their left side, and ask them to twist to their right again. Determine if their range of motion is greater.

NOTE: HYDRATE WHEN USING THE HOLOGRAPHIC DISCS!

It is important to be properly hydrated to get optimum benefit from the holographic discs (and be healthy), as energy is conducted through the body better when adequate water/hydration is available.
